Level 1 — Easy (E) Factors — Numbers

Find the number of factors for the given number
 Sample Input:
 Given number: 100
 Sample Output:
 Number of factors = 9

1. 343
 2. 1080
 3. -243
 4. 101010
 5. 0

Your Code

```
1 import java.util.Scanner;
2 class factors{
3     public static void main(String args[]){
4         Scanner sc=new Scanner(System.in);
5         int a=sc.nextInt();
6         System.out.println("Given number: "+a);
7         int f=0;
8         if(a<0){
9             a=-a;
10        }
11        for (int i=1;i<=a;i++){
12            if(a%i==0){
13                f+=1;
14            }
15        }
16        System.out.println("Number of factors = "+f);
17    }
18 }
```

Output

```
Given number: -100
Number of factors = 9
```

Level 1 — Easy (E) RT-Pattern — Loops

Write a program to print the following pattern
 Sample Input:
 Enter the Character to be printed: %
 Max Number of time printed: 3
 %
 % %
 % % %

Your Code

```
1 import java.util.Scanner;
2 class print{
3     public static void main(String args[]){
4         Scanner sc=new Scanner(System.in);
5         String ch=sc.next();
6         System.out.println("Enter the Character to be printed: ");
7         int n=sc.nextInt();
8         System.out.println("Max Number of time printed: ");
9         for(int i=0;i<n;i++){
10             for(int j=0;j<=i;j++){
11                 System.out.print(ch+" ");
12             }
13             System.out.println();
14         }
15     }
16 }
```

Output

```
Enter the Character to be printed: %
Max Number of time printed: 3
%
% %
% % %
```

Level 1 — Easy (E) Valid or Not — Strings

Write a program to check the entered user name is valid or not. Get both the inputs from the user.
 Sample Input:
 Enter the user name: Saveetha@789
 Reenter the user name: Saveetha@123
 Sample Output:
 User name is Invalid

1. xyz
 2. zyX
 3. X@123

Your Code

```
1 import java.util.Scanner;
2 class val{
3     public static void main(String args[]){
4         Scanner sc= new Scanner(System.in);
5         String un=sc.nextLine().trim();
6         String reun=sc.nextLine().trim();
7         System.out.println("Enter the user name: "+un);
8         System.out.println("Reenter the user name: "+reun);
9         if(un.equals(reun)){
10             System.out.println("User name is valid");
11         }
12         else{
13             System.out.println("User name is Invalid");
14         }
15     }
16 }
17 }
```

Output

```
Enter the user name: Saveetha@xyz
Reenter the user name: Saveetha@zyx
User name is Invalid
```

Level 1 — Easy (E) Matrix Addition — Array ✓ Submit

Write a program for matrix addition?

Sample Input:

```
Mat1 =
1 2
5 3
Mat2 =
2 3
4 1
```

Sample Output:

```
Mat Sum =
3 5
9 4
```

Your Code

```
1 import java.util.Scanner;
2 class mat{
3     public static void main(String args[]){
4         Scanner sc= new Scanner(System.in);
5         int mat1[][]=new int[2][2];
6         int mat2[][]=new int[2][2];
7         int mat3[][]=new int[2][2];
8         System.out.println("enter the elements for first 2x2 matrix:");
9         System.out.println("Enter the elements for second 2x2 matrix:");
10        System.out.println("Mat1 = ");
11        for (int i=0;i<2;i++){
12            for (int j=0;j<2;j++){
13                mat1[i][j]=sc.nextInt();
14                System.out.print(mat1[i][j]+" ");
15            }
16            System.out.println();
```

Output

```
enter the elements for first 2x2 matrix:
Enter the elements for second 2x2 matrix:
Mat1 =
1 2
5 3
```

```
18        System.out.println("Mat2 = ");
19        for(int k=0;k<2;k++){
20            for(int l=0;l<2;l++){
21                mat2[k][l]=sc.nextInt();
22                System.out.print(mat2[k][l]+" ");
23            }
24            System.out.println();
25        }
26        System.out.println("Mat Sum = ");
27        for(int a=0;a<2;a++){
28            for(int b=0;b<2;b++){
29                mat3[a][b]=mat1[a][b]+mat2[a][b];
30                System.out.print(mat3[a][b]+" ");
31            }
32            System.out.println();
```
