

## 1) Industrial task 1: employee performance and payroll dashboard

The screenshot displays an IDE environment for developing a payroll application. On the left, a window titled "Employee Payroll Dashboard" contains a form with fields for Employee ID (123), Employee Name (ravi), Department (HR), Designation (Manager), Basic Salary (20000), and Working Days (30). It also has checkboxes for Performance (Punctual, Teamwork) and buttons for "Generate Report" and "Reset". Below the form, a "PAYROLL REPORT" section shows the entered details and a message "Report generated for ravi".

The central code editor shows the `PayrollApp.java` file. The code defines a `PayrollApp` class that extends `Frame` and implements `ActionListener`. It includes a `actionPerformed` method that calculates performance based on criteria and displays gross salary, bonus, deduction, and net salary. A `main` method is also present.

```
4 public class PayrollApp extends Frame implements ActionListener {
76 public void actionPerformed(ActionEvent e) {
133     "Performance : " + ratingLabel + " / 3 criteria met\n" +
134     "-----\n" +
135     "Gross Salary : " + String.format("%.2f", grossSalary) + "\n" +
136     "Bonus (" + bonusPercent + "%) : " + String.format("%.2f", bonus) + "\n" +
137     "Deduction(10%): " + String.format("%.2f", deduction) + "\n" +
138     "Net Salary : " + String.format("%.2f", netSalary) + "\n"
139 };
140 }
141
142 public static void main(String[] args) {
143     new PayrollApp();
144 }
145
```

The terminal window at the bottom shows the compilation and execution process:

```
PS F:\java assessment\IT1 EMP PERFORMANCE\src> javac PayrollApp.java
PS F:\java assessment\IT1 EMP PERFORMANCE\src> java 'PayrollApp.class'
Error: Could not find or load main class PayrollApp.class
PS F:\java assessment\IT1 EMP PERFORMANCE\src> java 'PayrollApp$.class'
Error: Could not find or load main class PayrollApp$.class
PS F:\java assessment\IT1 EMP PERFORMANCE\src> java 'PayrollApp$1.class'
Error: Could not find or load main class PayrollApp$1.class
PS F:\java assessment\IT1 EMP PERFORMANCE\src> java PayrollApp
```

## 2) Industrial task 2: food ordering and billing system

The screenshot displays an IDE environment for developing a food ordering and billing system. On the left, a window titled "Food Ordering & Billing System" shows an "ORDER BILL" section with a list of items: Customer: rahul, Table No: 13, Fried Rice x1 = Rs.150.0, Subtotal: Rs.150.00, GST (5%): Rs.7.50, and Final Bill: Rs.157.50. It includes buttons for "Previous", "Generate Bill", and "Clear".

The central code editor shows the `FoodOrderApp.java` file. The code defines a `FoodOrderApp` class that extends `Frame` and implements `ActionListener`. It includes a `CardLayout` and a `Panel` for displaying order details, food selection, and bill summary. The code uses `TextField`, `Choice`, `List`, `ArrayList`, and `TextArea` components.

```
2 import java.awt.event.*;
3 import java.util.ArrayList;
4
5 public class FoodOrderApp extends Frame implements ActionListener {
6     CardLayout cl; 7 usages
7     Panel cardPanel; 10 usages
8
9     // Card 1 - Customer/Order Details
10    TextField tfName, tfTable; 5 usages
11
12    // Card 2 - Food Selection
13    Choice chCategory, chItem; 7 usages
14    TextField tfQty; 4 usages
15    List listOrder; 4 usages
16    ArrayList<String> orderItems = new ArrayList<>(); 4 usages
17    ArrayList<Double> orderPrices = new ArrayList<>(); 3 usages
18    ArrayList<Integer> orderQty = new ArrayList<>(); 4 usages
19
20    // Card 3 - Bill Summary
21    TextArea taBill; 5 usages
```

The terminal window at the bottom shows the compilation and execution process:
